

United's Goal **ZERO** **HARM**

We Care, We Can, We Install

**We Install, We Maintain
SureFlo Dosing System**

**You Rest Assured,
Satisfaction Guaranteed**

**Eradicate Drain Blockages Caused by Suction System Discharge
from Operating Rooms, Laboratories, Autopsy and Pathology**

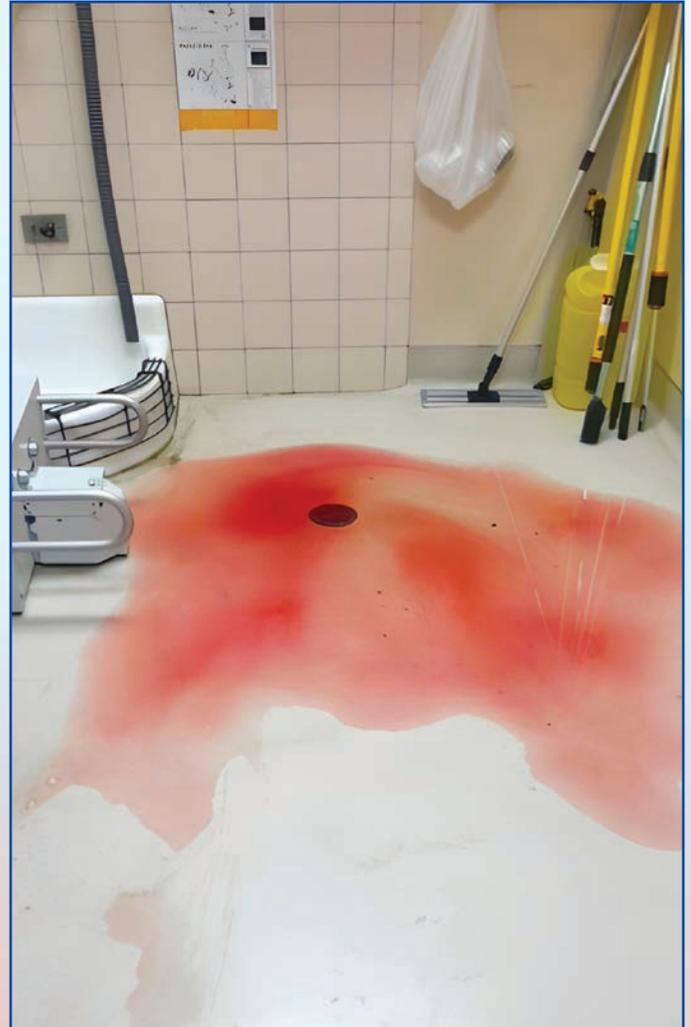

BIOSPOR-E + SureFlo Dosing System = **ZERO HARM**

Biological fluids collected in suction systems from operating rooms, laboratories, autopsy and pathology suites create unique drain maintenance issues. Discharge from the suction systems is disposed of down sink or sanitary drains and the proteins and other organic matter in the discharge encourages the development of biofilm. Biofilm buildup in drains soon leads to costly backups and possible exposure to the bodily fluids in the drains.

United provides a system featuring **United 722SF BIOSPOR-E** and the SureFlo Dosing System to control these backups with Zero Harm as the goal.

ZERO HARM:

- **For Safety of Employees/Patients** –
 - Use of system minimizes contact with product;
 - System eradicates buildup in the drains eliminating unwanted contact with the biofilm and biological fluids.
- **For the Environment** – With Safe Earth Smart® Certified Product Formula;
- **For the Drains** – Blend of Beneficial Bacteria and Enzymes Will Not Harm Plumbing;
- **For the Budget** – Reduces lost time and money associated with drain backups by keeping the drains free flowing.

For Metered Dosing of Drain Treatment use... United 722SF BIOSPOR-E

Paired with our SureFlo Dosing System **United 722SF BIOSPOR-E:**

- Delivers regularly timed, metered dosing of drains.
- Provides a bio-based, Earth Smart® Certified solution for operating room drains.
- Significantly reduces blockages and odors.
- Contains beneficial bacteria strains and enzymes that target and eradicate drain biofilm and drain protein buildup.
- **For more information on ways to control harmful biofilms, access the White Paper Abstract published by the National Library of Medicine at unitedlabsmdsupply.com.**

The Simple Solution for Drain Treatment Begins With The SureFlo Dosing System

The SureFlo Dosing System provides:

- An Economical, Programmable Dosing Solution
- Ease of Installation
- Flexibility of Installation (Wall Mount or Free-Standing)
- Ease of Use
- Small Footprint
- A Unique Inter-Locking System
- Safety by Limiting Spills and Contact with Product
- Reduced Labor
- Maintenance Free System

SureFlo Offers Added Safety and Security

Product used with the SureFlo Dosing System is packaged in special one gallon bottles that feature a self-venting containment insert in the top opening. This insert reduces possibilities of spills and limits any actual contact with the product.

When the bottle is placed in the SureFlo housing, the containment insert then couples with the locking head to allow feeding of product. Once locked in place the product is secure, eliminating accidental spills.

The SureFlo Dosing System is virtually maintenance free.

The SureFlo Dosing System can easily be installed by your staff or your United Representative. While there is little maintenance needed for the metering pump itself, you can count on your United Representative to take care of any programming, maintenance and even changing out product at scheduled intervals. See back page for available equipment information.

SureFlo Equipment

A2015 SureFlo Dosing System

The original easy-to-use AC powered SureFlo Dosing System is proven in the field.

A2015B SureFlo Battery Operated Dosing System

Operating on 4, D-cell batteries, this system provides even more flexibility of installation, with all the benefits of the original system.

A2015C SureFlo Wall Box Cabinet

Perfect for use in critical care rooms, or anywhere you want to be able conceal either the A2015 or A2015B SureFlo systems. Lock and key, provide added security.
